Dear Mr. Dziwiński,

Thank you for participating in the State-of-the-Art Echo 2017 conference. The transesophageal simulator was one of the highlights of the conference. The possibilities for training interventional echocardiographers on individual patient imaging will revolutionize how we perform our pre-procedural testing, enhance intra-procedural guidance and likely improve procedural outcomes.

After discussions here at Columbia University and the Cardiovascular Research Foundation, I am pleased to propose a collaboration with Medical Simulation Technologies in a project to initiate this new training algorithm.

Sincerely,

Rebecca T. Hahn, MD, FACC
